

Coronavirus

Home Isolation Discontinuation Guidelines

People with COVID-19 who have stayed home (home isolated) can stop home isolation under the following conditions:

- No fever for at least 72 hours (that is three full days of no fever without the use of medicine that reduces fevers)

AND

- other symptoms have improved (for example, when your cough or shortness of breath have improved)

AND

- at least 7 days have passed since your symptoms first appeared

In all cases, follow the guidance of your healthcare provider and local health department.

* We will be notifying your primary care provider of your results. If you have additional questions, make sure you contact your primary care provider or the Georgia Department of Public Health.

** If your results return negative we will contact you and your primary care provider with results.

If you do not have a primary care physician, please visit phoebehealth.com or call 229-312-MYMD.

While waiting for results patients should remain in isolation, practice frequent handwashing and cleaning of common surfaces. If symptoms increase in severity, contact 911.
